

Lycon Waxing

Lycon Waxing

At KG Beauty Salon, we use Lycon waxing, a premium waxing system known for being gentle on the skin while delivering effective hair removal results.

Lycon wax is formulated with natural resins and soothing ingredients to help reduce discomfort while removing hair from the root. It can remove even very short hairs and is suitable for sensitive areas.

Benefits of Lycon Wax

Lycon waxing offers several advantages compared to traditional waxing methods:

- Removes hairs as short as 1mm
- Helps reduce discomfort during treatment
- Gentle on sensitive skin
- Works at a lower temperature than standard wax
- Helps reduce redness and irritation

Lycon wax grips the hair rather than the skin, which helps make the treatment more comfortable.

What to Expect During Waxing

Before waxing, a pre-wax oil is applied to help protect the skin. The wax is then applied and removed to gently remove unwanted hair from the root.

Depending on the treatment area, the appointment length may vary.

Results & Aftercare

After waxing, you may experience slight redness, which normally settles quickly. Skin will feel smooth and hair-free.

For best results:

- Avoid heat treatments, saunas or hot baths for 24 hours
- Avoid applying perfumed products to the treated area
- Exfoliate regularly after a few days to help prevent ingrown hairs

Hair removal results typically last 3–4 weeks, depending on individual hair growth cycles.
